1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over US Pat. No. 5576382 Seneker et al..

Seneker discloses an aqueous composition of polyurethane of the instantly claimed particle size and containing high solids content. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the polyol and polyisocyanate of the patentee that give the instantly claimed structural unit because they are disclosed by the patentee at column 5, lines 27 and 39-53. See the entire document, particularly column 8, line 66 to column 9, line 6 and the examples. It is noted that the solids content of the examples is less than that of the instant claims. It would have been obvious to one of ordinary skill in the art at the time of the instant invention to use the instantly claimed solids content because Seneker discloses the use of high solids content at 2, lines 45-47 and the slight increase in solids content over that of the examples would give a predictable increase in viscosity of the composition and change the coating properties as would be readily understood by the ordinary skilled artisan. Since the exemplified compositions containing over 40% solids have very low viscosities, adding a few more percent of solids would not be expected to render the composition useless.
